

HOW DO YOU **SCREEN** YOUR **VISITORS?**

ENTRYSIGN CAN HELP

With EntrySign you can ensure that anybody who enters your premises is screened in 4 easy steps:

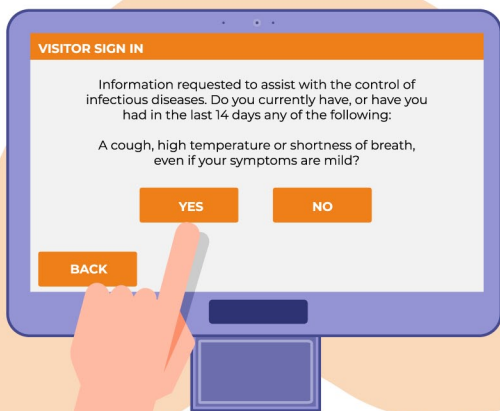

1 Arrival at Site

Now more than ever, it is important to screen your visitors, contractors and staff. EntrySign allows you to define custom questions, which you can ask when people arrive at your premises.

2 Signing In

When visitors or staff arrive, they are asked to sign in as normal. During the sign-in process, they will be asked the questions you have defined. An example would be "have you experienced a new, continuous cough, or high temperature within the last 14 days?". You could also ask about recent travel or anything else which is relevant to your organisation.

3 Screening Visitors

As questions are answered by the visitor or staff member, branching options allow you to tailor the questions based on the answers provided. If a visitor declares that they have had any symptoms, you may request further information, such as whether they have travelled to/from specific destinations or whether they have been tested.

4 Granting Access

You can choose the resulting course of action depending on the answers provided. You could for example allow entry, deny access or notify a designated person. You can also use EntrySign to record information for auditing purposes, even if no further action is required.
